

FyreWrap® Marine Blanket Insulation

Passive Fire Protection for Marine and Offshore

Superior Life Safety and Equipment Protection

FyreWrap® Marine Blanket provides fire protection insulation for life safety and equipment protection in a variety of rated assemblies on marine vessels and offshore platforms. Bulkheads and decks are commonly insulated with FyreWrap – a fire resistant, high temperature insulation that complies with SOLAS Safety Objectives and IMO FTP Code fire test requirements.

Specifically Designed for Marine Applications

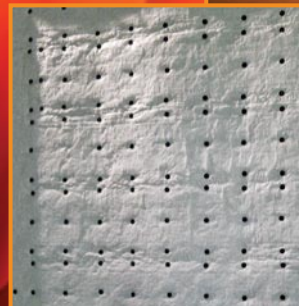

FyreWrap Marine Blanket from Unifrax, a worldwide supplier of marine blanket, is a totally inorganic, flexible, high-temperature insulation blanket specifically designed to provide passive fire protection for marine applications. The insulation utilizes a calcia, magnesia, silica chemistry designed to enhance biosolubility. Unifrax's proprietary fiber spinning technology combined with mechanical needling of the fibers eliminates the need for binders in the product. This results in a chemically stable material with high tensile strength and superior thermal and acoustical properties.

Flexible, Lightweight, Saves Labor

FyreWrap Marine systems offer a superb insulation value in a flexible, lightweight, noncombustible product form resulting in lower installation costs and significant weight savings. This offers builders and owners reduced structure weight, yielding increased vessel speed, fuel savings and available payloads.

Meets the Needs of Worldwide Customers

- ABS, USCG, and Lloyds Certified for steel and aluminum structures.
- Complies with SOLAS safety objectives.
- Meets IMO FTP code fire test requirements, Res. A.754(18).
- Complies with Fire Resisting Division for High Speed Craft (HSC); Res. MSC.45 (65).

Certifications

- USCG
- US Navy
- ABS
- Lloyds
- Bureau Veritas
